

Spotlight Award

SIMON CHU

This award to recognize the Electro-Optical Infrared (EO/IR) Weather System (EWS) satellite program team for successfully completing the Final Design Review and subsequently winning the prototype system and is a testament to our entire team's dedication to completing a high-fidelity design in a very short time. EWS is more than a demonstrator. The system will provide 3-to-5 years of on-orbit operational capabilities to help fill EO/IR data gaps as the legacy DMSP satellites are retired

Nominated by STEVE MARXER

Nominated for Deliver & Drive Excellence – We are committed to excellence in everything we do, bringing commitment and passion to every project and product
